# 2.0 PRE-DELIVERY & DELIVERY CHECK LIST

Check List

# Meyer Manufacturing Corporation

Phone: 715-654-5132 • Toll-Free: 1-800-325-9103 • P.O. Box 405 • Dorchester, WI 54425

This Pre-Delivery & Delivery Check List must be gone through by the Selling Party and the Customer to validate the Owner's Registration Form.

## PRE-DELIVERY CHECK LIST

After the New Meyer XTS Trailer has been completely set-up, check to be certain it is in correct running order before delivering it to the customer.

The following is a list of points to inspect:

Check off each item as you have made the proper adjustments and found the item operating satisfactorily. Any adjustments made, MUST be according to specifications defined in this manual.

All shields and guards are in place and securely fastened.
All bolts and other fasteners are secure and tight.
All mechanisms operate trouble free.
All grease fittings have been lubricated. See "Lubrication" section of this manual.
All decals are in place and legible.
All stop/tail/turn lights work properly.

### **DELIVERY CHECK LIST**

The following check list is an important reminder of valuable information that MUST be passed on to the customer at the time the unit is delivered.

Check off each item as you explain it to the customer.

Explain to the customer that pre-delivery check list was fully completed.
Give customer the Owner & Operator's Manual. Instruct to read and completely understand its contents BEFORE attempting to operate the trailer.
Explain and review with customer the Meyer XTS Trailer manufacturer's warranty.
Show the customer where to find the serial number on the implement.
Explain and review with the customer "Safety Precautions" section of this manual.
Explain and review with customer the proper "Operating Procedures" sections of this manual.
Explain that regular lubrication and proper adjustments are required for continued proper operation and long life of the trailer. Review with the customer the "Lubrication" and "Adjustments" sections of this manual.
Fully complete this "PRE-DELIVERY & DELIVERY CHECK LIST" with the customer.

# FARM EQUIPMENT BUYERS TRUST THE NAME MEYER!

# 3.0 INTRODUCTION

Congratulations on your purchase of a new Meyer farm equipment product. Undoubtedly you have given much consideration to your purchase and we're proud that you have selected Meyer. Pride in craftsmanship, engineering and customer service have made Meyer products the finest in the farm equipment industry today.

There is no substitute for quality. That is why thousands of people like you have purchased Meyer farm equipment. They felt it was the best equipment to serve their farming needs, now and in years to come. We ask that you follow our policy of "safety first", and we strongly suggest that you read through the Owner/Operator's Manual & Parts Book before operating your Meyer farm equipment. Meyer Manufacturing Corporation wants to thank you for not compromising quality. We are determined to offer excellence in customer service as well as provide you with the very best value for your dollar.

Sincerely,

All Employees of

MEYER MANUFACTURING CORPORATION

The PB-ADR manual should be used in conjunction with this manual for the following models: XTSSW45-348B.

The PB-MERITOR manual should be used in conjunction with this manual for the following models: XTSW24-228B and XTSW30-276SB.

The Model XTS Trailer may be referred to as equipment, machine, or trailer in this manual.

NOTE: All references to right hand (RH), left hand (LH), front and rear apply to the products as viewed from the rear of the trailer.

**IMPORTANT:** You are urged to study this manual and follow the instructions carefully. Your efforts will be repaid in better operation and service as well as a savings in time and repair expense. Failure to read this manual and understand the machine could lead to serious injury. If you do not understand instructions in this manual, contact either your dealer or Meyer Manufacturing Corp. at Dorchester, WI 54425.

**WARRANTY:** At the front of this manual is the Owner's Registration Form. Be sure your dealer has completed this form and promptly forwarded a copy to Meyer Manufacturing to validate the manufacturer's warranty. The product model and serial number are recorded on this form and on the inside of the front cover for proper identification of your Meyer XTS Trailer by your dealer and the manufacturer when ordering repair parts. The serial number is stamped in the front left hand frame tube.

**REPAIR PARTS:** At the back of this manual is the repair parts section. All replacement parts are to be obtained from or ordered through your Meyer dealership. When ordering repair parts, refer to the parts section and give complete information including quantity, correct part number, detailed description and even models and serial numbers of the trailer which needs repair parts.

**Manufacturer's Statement:** Meyer Manufacturing Corporation reserves the right to make improvements in design, or changes in specifications at any time, without incurring any obligation to owners of units previously sold. This supersedes all previous published instructions.

# 4.0 MANUFACTURER'S WARRANTY

# **MEYER XTS TRAILER**

- I. The "Product Registration & Inspection Certificate" along with the original billing invoice "Owner's Registration Form" must be completed in full and promptly returned to Meyer Mfg. Corp. for this warranty to become both valid and effective. All warranties on New Meyer XTS Trailers shall apply only to the original retail customer from an authorized Meyer Mfg. Corp. dealership.
- II. This warranty shall <u>not</u> apply to any Meyer Trailer which has been subjected to misuse, negligence, alteration, accident, <u>incorrect</u> operating procedures, or which shall have been repaired with parts other than those obtained through Meyer Mfg. Corp.
- III. Meyer Mfg. Corp. warrants New Meyer Trailers to be free from defects in material and workmanship under recommended use and maintenance service, as stated in the Operator's and Parts Manual, as follows:
  - A. Meyer Mfg. Corp. will repair or replace F.O.B. Dorchester, WI, as Meyer Mfg. Corp. elects, any part of a new Meyer Trailer which is defective in material or workmanship:
    - i. Without charge for either parts or labor during the first (1) year from purchase date to the original retail customer.
    - ii. Without charge for <u>parts only</u> during the second (2) year from purchase date to the original retail customer.
  - B. In addition to the above basic warranty, Meyer Mfg. Corp. will repair or replace F.O.B. Dorchester, WI as Meyer Mfg. Corp. elects:
    - i. Any part of the following which is defective in material or workmanship (not neglect to recommended use and service) without charge for <u>parts only</u> (not labor) during the stated time periods from date of purchase to the original retail customer:
- IV. COMMERCIAL USE: Coverage as in paragraph III.A.1. ONLY, except warranty coverage is for (90) days for parts and labor to the original commercial retail customer.
- V. Repairs eligible for labor warranty must be made by Meyer Mfg. Corp. or an authorized Meyer dealership. The original retail customer is responsible for the transportation of the forage box to the dealership for warranty service or for any service call expenses.
- VI. Except as stated above, Meyer Mfg. Corp. shall not be liable for injuries or damages of any kind or nature, direct, consequential, or contingent, to persons or property. This warranty does not extend to loss of crop or for any other reasons.
- VII. No person is authorized to give any other warranties or to assume any other obligation on Meyer Mfg. Corp.'s behalf unless made or assumed in writing by Meyer Mfg. Corp. This warranty is the sole and exclusive warranty which is applicable in connection with the manufacture and sale of this product and Meyer Mfg. Corp's responsibility is limited accordingly.

Tires, tarps, and scales are the original manufacturer's warranty.

# 5.0 SAFETY

The Meyer XTS Trailer is manufactured with operator safety in mind. Located on the trailer are various safety signs to aid in operation and warn of hazardous areas. Pay close attention to all safety signs on the trailer.

Carefully follow the operating and maintenance instructions in this manual and all applicable safety laws. Failure to follow all safety procedures may result in serious injury or death.

Before attempting to operate the trailer, read and study the following safety information. In addition, make sure that every individual who operates or works with the trailer, whether family member or employee, is familiar with these safety precautions.

Meyer Mfg. Corp. provides guards for exposed moving parts for the operator's protection; however, some areas cannot be guarded or shielded in order to assure proper operation. The operator's manual and safety signs on the trailer itself warn you of hazards and must be read and observed closely!

This symbol is used to call attention to instructions concerning personal safety. Be sure to observe and follow these instructions. Take time to be careful!

The signal word DANGER on the machine and in the manual identifies a hazardous situation which, if not avoided, <u>WILL</u> result in death or serious injury.

The signal word WARNING on the machine and in the manual indicates a potentially hazardous situation which, if not avoided, <u>COULD</u> result in death or serious injury.

The signal word CAUTION on the machine and in the manual indicates a potentially hazardous situation which, if not avoided, <u>MAY</u> result in minor or moderate injury. It may also be used to alert against unsafe practices.

This notice identifies procedures which must be followed to avoid damage to the machine.

Danger, Warning, Caution, and instructional decals and plates are placed on the equipment to protect anyone working on or around this machine, as well as the components of the machine. All personnel operating or maintaining this equipment must familiarize themselves with all Danger, Warning, Caution, and instructional decals and plates.

# **5.1 SAFETY PRECAUTIONS**

All individuals who will operate this trailer must read and completely understand this manual. Operator must have instructions before operating the machine. Untrained operators can cause injury or death.

- The PB-ADR manual should be used in conjunction with this manual for the following models: XTSSW45-348B.
- The PB-MERITOR manual should be used in conjunction with this manual for the following models: XTSW24-228B and XTSW30-276SB.
- DO NOT allow anyone to operate, service, inspect or otherwise handle this equipment until all operators have read
  and understood all of the instructional materials in this manual and have been properly trained in its intended usage.
- For an operator to be qualified, he or she must not use drugs or alcohol which impair alertness or coordination while
  working. An operator who is taking prescription drugs must get medical advice to determine if he or she can safely
  operate a machine and the equipment.
- Make sure all personnel can READ and UNDERSTAND all safety emblems.
- DO NOT allow minors (children) or inexperienced persons to operate this trailer.
- DO NOT operate until all shields and guards are in place and securely fastened.
- DO NOT step up on any part of the trailer at any time.
- DO NOT adjust, clean or lubricate while the trailer is in motion.
- Inspect when first delivered and regularly thereafter; that all connections and bolts are tight and secure before operating.
- Make certain area is clear of people, tools, and other objects before moving the trailer.
- Keep hands, feet and clothing away from moving parts. Loose or floppy clothing should not be worn by the operator.
- Observe all applicable traffic laws when transporting on public roadways (where legal to do so). Check local laws for all highway lighting and marking requirements.
- Always enter curves or drive up or down hills at a low speed and at a gradual steering angle.
- Never allow riders on either tractor / truck or equipment.
- Keep tractor / truck in a lower gear at all times when traveling down steep grades.
- Maintain proper brake settings at all times (if equipped).
- Stay away from overhead power lines. Electrocution can occur without direct contact.
- Use only properly rated undercarriage and tires.

# **Safety Precautions For Tractor Towed Units:**

- Do not exceed 20 mph (32 kph). Reduce speed on rough roads and surfaces.
- Always install a SMV emblem on pull-type equipment when transporting on roadways and keep clean and bright.
- Always yield to oncoming traffic in all situations and move to the side of the road so any following traffic may pass.

# **Safety Precautions For Hydraulic System:**

- Check hydraulic tubes, hoses and fittings for damage and leakage. Never use hands to check for leaks. Hydraulic tubes and hoses must be properly routed and have adequate support and secure clamps. Tighten or replace any parts that show leakage.
- Always clean fluid spills. Do not use gasoline or diesel fuel for cleaning parts. Use commercial nonflammable solvents.

# 5.1.1 Farm Implement Tires

# Recommended Safety Precautions

- Always remove the valve core and deflate the tire before any work is performed.
- Always use the proper and approved tools to demount and mount the tire.
- Always inspect all rim/wheel parts for wear, damage, cracks, rust or mismatched components.
- Always destroy damaged or unserviceable parts.
- Always inspect the tube and tire for cord or side damage, cuts or wear. Unrepairable damaged items must be discarded.
- Always check for mismatched components or tire and wheel sizes.
- Always lubricate tire with a non-flammable tire lubricant approved for that purpose.
- Always place tire and wheel in inflation cage or restraining device before inflating beyond 5 PSI.
- Always use an extension hose with a PSI gauge and clip on chuck when inflating the tire so you can stand to one side.

### Non - Recommended Safety Precautions

- Never work on a tire / wheel assembly before removing the valve core and completely deflating.
- Never re-inflate a tire that has been run flat or in an under inflated condition before removing and inspection.
- Never reuse damaged, defective, worn or mismatched parts.
- Never rework, weld, heat or braze any rim / wheel parts for any reason.
- Never inflate any tire beyond 40 PSI to seat the beads. If beads are not seated at 40 PSI. STOP! Deflate and determine problem.
- Never hammer, strike or pry on a rim / wheel assembly that contains any inflation pressure.
- Never inflate a tire without using an inflation cage or restraining device.
- Never inflate beyond the maximum PSI specified for the tire or rim.

# **5.2 SAFETY SIGNS**

Read all safety signs on the trailer and in this manual. Keep all safety signs clean and replace any damaged or missing safety signs before operating the equipment. Do Not remove any safety signs. Safety signs are for operator protection and information.

# **CRUSHING HAZARD**

To prevent serious injury or death:

- Keep hands and body out of hitch area when attaching towing vehicle.
- Keep body clear of crush point between towing vehicle and load.

PART NO. 46-0800-6

PART NO. 46-0800-7

2

To prevent serious injury or death:

- Read and understand owner's manual before using. Review safety precautions annually.
- Observe all applicable traffic laws when transporting on public roadways (where legal to do so). Check local laws for all highway lighting and marking requirements.
- Securely attach to towing unit. Use a high strength appropriately sized hitch pin with a mechanical retainer and attach safety chain.
- Do not exceed the chassis or tire load rating. Maximum gross weight is the lesser of the two.
- Do not exceed 20 mph (33 kph). Slow down for corners and rough terrain.
- Do not drink and drive.
- No riders allowed when transporting.
- Before moving running gear, be sure required lights and reflectors are installed and working.
- Before maintenance or repair, stop vehicle, set tractor parking brake, and remove ignition key.
- Place safety stands under frame and chock wheels before working on tires or running gear.
- Maintain wheel bolts at torque as recommended in the manual. If equipped with brakes, maintain proper adjustment.

**PART NO. 46-0800-8** 

# **IMPORTANT**

Trailer is to be used for agricultural use only. Travel only at tractor speeds.

PART NO. 46-2400-2

PART NO. 46-8500-7

PART NO. 46-0001-35

# 5.3 SHUTOFF & LOCKOUT POWER

Any individual that will be adjusting, servicing, maintaining, or clearing an obstruction from this machine needs to ensure that this machine stays safely "OFF" until the adjustment, service, or maintenance has been completed, or when the obstruction has been cleared, and that all guards, shields, and covers have been restored to their original position. The safety of all individuals working on or around this machine, including family members, are affected. The following procedure will be referred to throughout this manual, so be familiar with the following steps.

### 5.3.1 Shutoff & Lockout Power Recommendations

### 1. Think, Plan and Check

- a. **Think** through the entire procedure and identify all the steps that are required.
- b. **Plan** what personnel will be involved, what needs to be shut down, what guards / shields need to be removed, and how the equipment will be restarted.
- c. **Check** the machine over to verify all power sources and stored energy have been identified including engines, hydraulic and pneumatic systems, springs and accumulators, and suspended loads.
- 2. Communicate Inform everyone involved, including those working on or around this machine, that work is being done which involves keeping this machine safely "OFF".

### 3. Power Sources

- a. **LOCKOUT -** Shut off engines and take the key, or physically lock the start/on switch or control. Disconnect any power sources which are meant to be disconnected (i.e. electrical, hydraulic, and PTO of pull-type units).
- b. TAGOUT Place a tag on the machine noting the reason for the power source being tagged out and what work is being done. This is particularly important if the power source is not within your sight and/or will need to be isolated for a longer period of time.
- **4. Stored Energy -** Neutralize all stored energy from its power source. Ensure that this machine is level, set the parking brake, and chock the wheels. Disconnect electricity, block moveable parts, release or block spring energy, release pressure from hydraulic and pneumatic lines, and lower suspended parts to a resting position.
- 5. **Test -** Do a complete test and personally double check all of the above steps to verify that all of the power sources are actually disconnected and locked out.
- 6. Restore Power When the work has been completed, follow the same basic procedures, ensuring that all individuals working on or around this machine are safely clear of the machine before locks and tags are removed and power is restored.

It is important that everyone who works on this equipment is properly trained to help ensure that they are familiar with this procedure and that they follow the steps outlined above. This manual will remind you when to Shutoff & Lockout Power.

# 6.0 PRE-OPERATION

DO NOT allow anyone to operate, service, inspect or otherwise handle this trailer until all operators have read and understand all of the instructional materials in this manual and have been properly trained in its intended usage.

Verify that the trailer is securely fastened to the tractor / truck.

Verify that all connections and bolts / hardware are tight and securely fastened before operating the trailer.

Always keep all shields and guards in place and securely fastened.

Keep hands, feet and clothing away.

Wear safety glasses to prevent eye injury when any of the following conditions exist:

- When fluids are under pressure.
- Flying debris or loose material is present.
- Tools are being used.

Failure to heed may result in serious personal injury or death.

# 6.1 PRODUCT INSPECTION

Before using any equipment equipped with brakes the operation of the brakes should be checked. Failure to heed may result in serious personal injury or death.

### 6.1.1 Before Operating The XTS Trailer

Before operating the trailer for the first time and each time thereafter, check the following items:

- 1. Inspect the trailer for proper adjustments. (See 8.2 INSPECTION on page 34.)
- 2. Lubricate the equipment. (See 8.1 LUBRICATION on page 33.)
- 3. Make sure that all guards and shields are in place, secured and functioning as designed.
- 4. Check tires for proper inflation.
- 5. Check that the brakes are clean and clean them if necessary.

# 6.1.2 General Inspection

Inspect the chassis' axles, o-beams, spindles, tires, hitches, all safety shielding, safety signs and safety lighting regular. These parts if not watched closely, could pose potential injury or death. If any part is found in need of repair, follow the SHUTOFF & LOCKOUT POWER recommendations and have qualified personnel repair immediately.

Check to see that no obstructions are present on the trailer prior to use. Be sure that there are no tools laying on the trailer.

NOTE: The PTO horsepower requirements may not reflect adequate tractor size for towing the machine. Refer to tractor weight requirements for these recommendations and safety section for additional tractor and towing requirements.

See your Trailer / Chassis manual for further product safety and maintenance details.

### 6.2 HITCHING TO TRACTOR

Move to the operator's position, start the engine and release the parking brake.

Do not allow anyone to stand between the tongue or hitch and the tractor when backing up to the Trailer.

Move the tractor in front of the trailer. Slowly move the tractor backwards towards the trailer and align the drawbar with the implement's hitch.

NOTE: Lower or raise the trailer jack to properly align the drawbar and hitch.

Fasten the trailer hitch to the tractor drawbar with a properly sized hitch pin with safety retainer. (Reference ANSI/ASABE AD6489-3 Agricultural vehicles - Mechanical connections between towed and towing vehicles - Part 3: Tractor drawbar.) (See your Trailer / Chassis manual for further details.)

Before operation and after hitching the tractor to the implement, connect the light cords or any optional equipment connections to the tractor.

# 6.3 START-UP AND SHUT-DOWN

DO NOT allow anyone to operate, service, inspect or otherwise handle this trailer until all operators have read and understand all of the instructional materials in this Operator's And Parts Manual and have been properly trained in its intended usage.

Before operating the trailer, look in all directions and make sure no bystanders, especially small children are in the work area.

Disengage the hydraulic power, engage the machine's parking brake, stop the engine and make sure all moving components are completely stopped before connecting, disconnecting, adjusting or cleaning this equipment.

Always keep all shields and guards in place and securely fastened.

Keep hands, feet and clothing away.

# 6.3.1 Start-Up

Enter the tractor or truck and start the engine.

Slowly engage the PTO / hydraulics and operate at idle speed.

Have a second person visually inspect that the trailer is operating properly.

Disengage the PTO / hydraulics and stop the engine.

### 6.3.2 Shut-Down

Disengage the PTO / hydraulics.

Park the tractor / truck on a flat, level surface.

Engage the parking brake, stop the engine and exit the tractor or truck.

# 6.4 OPERATIONAL CHECKS

Before operating the trailer, look in all directions and make sure no bystanders, especially small children are in the work area.

Adjust and lubricate equipment as needed. (See 8.2 INSPECTION on page 34.) & (See 8.1 LUBRICATION on page 33.)

# AVOID SERIOUS INJURY OR DEATH

- Read and understand owner's manual before using. Review safety precautions annually.
- Before operating the trailer, look in all directions and make sure no bystanders, especially small children are in the work area.
- No riders allowed when transporting.
- Do not drink and drive.
- Before moving, be sure required lights and reflectors are installed and working.
- Before maintenance or repair, stop vehicle, set parking brake, and remove ignition key.
- Place safety stands under frame and chock wheels before working on tires or chassis.
- Maintain wheel bolts at torque as recommended in the manual.
- If equipped with brakes, maintain proper adjustment.

# **Pull-Type Units**

- Use flashing warning lights when transporting on ALL highways (public roadways) at ALL times (Tractor towed models) EXCEPT WHEN PROHIBITED BY LAW! (Check w/local law enforcement)
- By all state and federal laws, implement lights do not replace the SMV (Slow-Moving Vehicle) identification emblem. All towed agricultural vehicles must display SMV Emblems when traveling LESS than 20 mph (32 kph).
- Check for traffic constantly. Be sure you can see that no one is attempting to pass you and that all traffic is sufficiently clear from you before making any turns.
- Securely attach to towing unit. Use a high strength appropriately sized hitch pin with mechanical retainer and attach safety chain.
- Do not exceed 20 mph (32 kph). Slow down for corners and rough terrain.

# To Prevent Serious Injury Or Death

- Keeps hands and body out of the hitch area when attaching towing vehicle.
- Keep body clear of crush point between towing vehicle and load.

# To Prevent Serious Injury Or Death

- Shift to lower gear before going down steep grades.
- Avoid traveling on slopes or hills that are unsafe.
- Keep towing vehicle in gear at all times.
- Never exceed a safe travel speed (which may be less than 20 mph.).

You must observe all applicable traffic laws when transporting on public roadways. Check local laws for all highway lighting and marking requirements. Failure to heed may result in serious personal injury or death.

(Tractor Powered) Do not <u>tow</u> at speeds in excess of 20 mph. Failure to heed may result in serious personal injury or death.

# **IMPORTANT**

Trailer is to be used for agriculture use only. Travel only at tractor speeds.

# **IMPORTANT**

The PB-ADR manual should be used in conjunction with this manual for the following models: XTSSW45-348B.

The PB-MERITOR manual should be used in conjunction with this manual for the following models: XTSW24-228B and XTSW30-276SB.

# **IMPORTANT**

If you will travel on public roads and it is legal to do so, you must know all rules governing such operation. This will include lighting and brake requirements in addition to traffic rules.

NOTE: An Optional Highway Lighting Package is available to assist in meeting these requirements. See your Meyer Dealer for Details.

A safety chain must be installed to retain the connection between the tractor (or other towing vehicle) and implement whenever traveling on public roads in case the hitch connection would separate.

The chain must be of adequate size to hold the weight of the loaded trailer.

NOTE:If using a grab hook at the end(s) of the chain to secure the chain to itself, a hook latch (Item 1) must be installed.

The length of the safety chain is not to be any longer than necessary to turn without interference. If any chain links or attachment hardware are broken or stretched, repair before using. Store chain so it does not corrode or become damaged. Do not use this chain for other implements because the strength and length of the chain may not be adequate. Identify this chain for use on this particular trailer.

NOTE: Do not use the intermediate support (Item 2) as the attaching point.

If you do not have a safety chain, or a replacement safety chain is needed, see your local Meyer dealer and do not operate on public roads until you are able to travel with the safety chain properly installed.

#### 6.5.2 Trailer Brake Information

Three optional brake systems are offered for your trailer. A brake system is recommended for any trailer operated on public roads and may be a requirement.

### 6.5.2.1 Lever Operated Hydraulic Brakes

This brake system is connected to the tractor remote hydraulic ports and is controlled by the tractor hydraulic system. The two hose system has a hydraulic manifold with pressure relief to prevent the pressure to the brake activating cylinders to exceed the relief valve setting.

Applying hydraulic pressure from the tractor causes tractor hydraulic fluid to flow under pressure to the pressure relief valve and activates the brake activating cylinders to apply the brakes.

**Applying The Brakes** - Gradually move the tractor spool valve lever as required to apply the brake. The hydraulic hoses should be connected to the tractor ports so the spool valve lever gives the expected response. Test this after hooking up. If response is opposite of expected, reverse the hoses.

**Releasing The Brakes** - Move the tractor spool valve lever to the opposite direction and hold momentarily. Then return lever to the "float" position.

NOTE: Simply returning the spool valve lever to the neutral position without first moving the lever to the opposite position will not release the brakes.

When brakes are not required, the spool valve lever must be in the "float" position on the tractor spool valve.

### 6.5.2.2 Pedal Operated Hydraulic Brakes

This brake system is a one hose system. The single hydraulic hose must be connected to the tractor remote pedal port.

**Applying The Brakes** - Gradually apply the tractor brake pedal to apply the brakes.

**Releasing The Brakes** - Release the tractor brake pedal to release the brakes.

At no time should the brake system be used as a parking brake. With loss of hydraulic pressure, the brakes will lose their holding power.

### 6.5.2.3 Air Operated Brakes

Connect the control line (blue) from your truck air supply to the blue gladhand on the trailer. Connect the tank supply line (red) to the red gladhand on the trailer.

Applying The Brakes - Release air pressure to apply the brakes.

**Releasing The Brakes** - Apply air pressure to release the brakes.

If it is necessary to move the trailer and air pressure is not available to release the brakes, the air brake linkage must be adjusted to mechanically release the brakes.

### 6.5.3 Reverse Lock Instruction

Connect the hydraulic hoses to a bank on your tractor. Apply pressure to extend the cylinders. This will lock the steering axles in a straight position to allow you to back up. When you are done backing up, return the cylinders to their retracted position.

# 6.5.4 Tractor Towing Size Requirements

Use the following charts to help calculate the minimum tractor weight when towing without implement brakes. The minimum tractor weight, up to 20 mph (32 kph) needs to be two-thirds of the box Gross Weight (GW). Gross Weight is calculated by the empty weight of the box and undercarriage combined added to the Load Weight. Then take the Gross Weight and multiply it by 0.667 and you will get the Minimum Required Weight of the Tractor.

# Gross Weight

TRAILER WEIGHT, EMPTY (LBS)		UNDERCARRAIGE LOAWEIGHT (LBS)		LOAD (LBS)		GROSS WEIGHT (GW) (LBS)
	+		+		=	GW
	+		+		=	

Minimum Required Weight of the Tractor

2/3		GROSS WEIGHT (GW) (LBS)		MINIMUM TRACTOR WEIGHT (LBS)
0.667	Х	GW	=	TW
	Х		=	

# 7.0 OPERATION

DO NOT allow anyone to operate, service, inspect or otherwise handle this trailer until all operators have read and understand all of the instructional materials in this Operator's And Parts Manual and have been properly trained in its intended usage.

Before operating the trailer, look in all directions and make sure no bystanders, especially small children are in the work area.

Do not climb or step on any part of the trailer at any time.

Turn on level ground. Slow down when turning.

Go up and down slopes, not across them.

Keep the heavy end of the machine uphill.

Do not overload the machine.

Check for adequate traction.

# 7.1 LOADING

Shutoff and lockout power before adjusting, servicing, maintaining, or clearing an obstruction from this machine. Failure to heed may result in serious personal injury or death.

Overloading may cause failure of axles, tires, structural members, hitches, loss of vehicle control. <u>DO NOT</u> exceed maximum gross weight. (See 10.0 SPECIFICATIONS on page 99.)

Loading the trailer evenly from the front to rear will ensure there is downward force on the tractor hitch and provide traction for the tractor wheels.

NOTE: Overloading can have detrimental effects on the integrity of the implement and it's safe use. Some materials such as soybeans may not be able to be filled to struck level. Overloading will void warranty and increase risk to the operator's safety. Always be aware of your gross weight.

MAXIMUM TRAILER GROSS WEIGHTS					
MODEL MAXIMUM GROSS WEIGHT (LBS)					
XTSW24 - 228B	48,000				
XTSW30 - 276SB	60,000				
XTSSW45 - 348B	90,000				

NOTE: Maximum Gross Weight applies only when equipped with properly rated tires.

### 7.2 UNHOOKING THE TRACTOR

- 1. Park the implement on level ground. Put the tractor controls in neutral, set the parking brake, and turn the engine off before dismounting.
- 2. Place wheel chocks in front and in back of the implement wheels on opposite sides to prevent the implement from rolling after the tractor is unhooked.
- 3. Remove the light cords and any optional equipment connections.
- 4. Remove the jack from the storage mount and install it on the hitch tongue. Crank the jack down until the hitch lifts off the tractor draw bar.

Jack may not be designed to support the implement when it is loaded.

- 5. Remove the hitch pin.
- 6. Unhook safety chain from tractor drawbar and intermediate support.
- 7. Slowly drive the tractor away from the implement.

### 7.3 OPERATION XTSSW45-348B

# 7.3.1 Locking Steering Axle

\*\*These numbers are for example only.

# Manual Self-Steering Axle

The self steering axle consists of a fixed part, (Item 1), called the sleeve, that is fixed to the suspension and a moving part comprising of several parts:

- Two sets of arms swinging in relation to two pivot points (Item 3).
- One solid axle body (Item 2), sliding in the sleeve.
- Two connecting links (one at the front (Item 4), and one at the rear (Item 5) which are held by hydraulic cylinders (Items 6 & 7) and depend on the direction of vehicle movement.

The arms and the body form a directional assembly, connected by two connecting links enabling forward or reverse operation of the axle, alternately and depending on the locking (front or rear). When the towed vehicle exercises a force to steer the wheels with one of the connecting links locked, the body slides in the sleeve allowing the links to move in the direction of movement of the vehicle.

**To Engage Forward Movement:** The locking of the front cylinder(s) (Item 6) immobilizes the front connecting link (Item 4) completely. The rear connecting link (Item 5) remains free, the cylinder(s) (Item 7), are not under pressure. In this configuration the self steering axle operates like a conventional trailing axle. It follows the movement of the vehicle. The shock absorber(s) (Item 8), attached to the rear connecting link and the sleeve have the effect of damping unwanted movement and stabilizing the units, especially when traveling in a straight line.

**To Engage Reverse Movement:** The locking of the rear cylinder(s) (Item 7) immobilizes the rear connecting link (Item 5) completely. The front connecting link (Item 4) becomes free by the release of the cylinder(s) at the front (Item 6). In this configuration the self steering axle operates in the same way as it does in forward drive. It follows the movement of the vehicle.

Figure above shows the latest version of the self steering axle with two locking cylinders in the connecting links; the previous version was fitted with four single acting locking cylinders, two at the front and two at the rear.

**Important Reminder:** The design and construction of the hydraulic cylinder control are the responsibility of the vehicle manufacturer. For all additional information refer to the vehicle manual.

# 7.3.2 Oil Gear, ADR - Colaert Essieux Hydraulic Systems

# Manual Control System of Steering Axles

The adjusting unit is located on the trailer and it is enabled by the operator on the ground. It is suitable for STB and STJ steering systems and it is compatible with the previous STC system as well. It allows adjusting separately the two supply lines of the steering axle and it includes in one block the ball valves, the accumulators and the pressure gauges. The system can be fed by the tractor or by an auxiliary pump on the trailer.

# 8.0 MAINTENANCE

Before servicing this equipment, insure that all personnel, including family members are familiar with the equipment and the safety hazards that are present, along with the safety practices that should be observed while working in this equipment.

Before servicing or inspecting this trailer, have it hitched to a tractor with engine off, keys removed and parking brake set or chock all four wheels of trailer.

# **IMPORTANT**

Fluid such as hydraulic fluid, grease, etc. must be disposed of in an environmentally safe manner. Some regulations require that certain spills and leaks on the ground must be cleaned in a specific manner. See local, state and federal regulations for the correct disposal.

The PB-ADR manual should be used in conjunction with this manual for the following models: XTSSW45-348B.

The PB-MERITOR manual should be used in conjunction with this manual for the following models: XTSW24-228B and XTSW30-276SB.

### 8.1 LUBRICATION

NOTE: Use a grease type that is composed of a high quality lithium complex or better, unless otherwise stated. We recommend using a #1 grade in colder temperatures or a #2 grade in warmer temperatures.

**DAILY** or every 8-10 loads:

• Grease the hitch (Item 1) (both sides).

# Weekly or every 25-30 loads:

 Check the oil level in each wheel hub (Item 1). The oil should be 1/2" high in the sight glass (Item 2). If low, add EP80/90 gear lube through the pop out rubber plug (Item 3) at the center of the hub.

# **Every Two Years** or when discolored:

 Drain oil from wheel hubs (Item 1) and refill with EP80/90 oil every 2 yrs or if oil becomes discolored from water or other contamination.

# Equivalent Viscosity of ISO-VG Grades at 104°F and SAE Gear Lube Grades

ISO-VG Grade	SAE Gear Lube Grade		
46	75W		
100	80W-90		
220	90		
460	85W-140		
1500	250		

# 8.2 INSPECTION

### Daily or every 8-10 loads:

- Check wheel hub lug bolts for proper torque. See page 35.
- Check tires for proper inflation. See page 36.

# Monthly or every 100-150 loads:

Check trailer for loose and fatigued fasteners. Check all pivots for play. Tighten or replace as required.

# Annually:

- Check tires for wear and replace when necessary.
- Check torque on spring to axle u-bolts and spring shackle bolts as instructed on page 35.

### 8.3 SUSPENSION TORQUE REQUIREMENTS

After an initial break in period approximately four months and periodically thereafter, **ALL** bolts and nuts should be checked to insure that recommended torque values are being maintained.

Lubricated torque values listed are for new fasteners with lubricated threads. It is recommended that new installations be performed with oiled fasteners. For dry threads which have been in service, use the higher torque values which are noted below.

SIZE	DESCRIPTION	LUBRICATED	DRY
1 1/8-7	Rocker Bolt	590 lb-ft	790 lb-ft
1-14 or 1-8	Radius Bolt	540 lb-ft	720 lb-ft
7/8-14	Axle U-Bolt & Radius Rod Bolt	350 lb-ft	470 lb-ft
3/4-16	Axle U-Bolts	310 lb-ft	420 lb-ft
5/8-18	Radius Rod Clamp Bolt	130 lb-ft	170 lb-ft
5/8-18	Spring Retainer Bolt	35 lb-ft	50 lb-ft

#### 8.4 WHEEL TORQUE REQUIREMENTS

BOLT/STUD SIZE	SOCKET SIZE	PRESS FORMED WHEEL CENTER	BOLT TYPE	HEAVY DUTY WHEEL CENTER
22MM	33MM	N/A	Flange Nut	450-500 lb-ft

### 8.5 FARM IMPLEMENT TIRES

Inflation pressures should be checked at least every week. Recommended inflation pressures based on total load on tires should be used. For accurate inflation use a special low-pressure gauge with one-pound gradations. Gauges should be checked occasionally for accuracy. Always use sealing valve caps to prevent loss of air.

### Tire Overload or Under Inflation

Tire overload or under inflation have the same effect of over-deflecting the tire. Under such conditions the tread on the tire will wear rapidly and unevenly, particularly in the shoulder area. Radial cracking in the upper sidewall area will be a problem. With under inflated drive tires in high torque applications sidewall buckles will develop leading to carcass breaks in the sidewall. While an under inflated drive tire may pull better in some soil conditions, this is not generally true and not worth the high risk of tire damage that such an operation invites.

# Over Inflation

Over inflation results in an under-deflected tire carcass. The tread is more rounded, concentrates tread wear at the centerline area. Traction is reduced in high torque service because ground contact of the tread shoulder area is reduced and the harder carcass, with reduced flexing characteristics, does not work as efficiently. The tightly stretched over-inflated carcass is more subject to weather checking and impact break damage.

# Pressure Adjustments Required - Slow Speed Operation

Higher tire loads are approved for intermittent service operations at reduced speed. Under such conditions, inflation pressure must be increased to reduce tire deflection and assure full tire service life. See Page 36 for proper inflation.

# Use of Proper Width Rims

If tires are mounted on rims of incorrect width, the following conditions can result:

- Use of a wider rim results in flattening of the tread face. This feature may improve traction in loose soil conditions. In
  hard soils, however, the flatter tread penetrates less effectively and tractive effort is reduced. Additional stresses
  concentrated in the shoulder area tend to increase the rate of shoulder tread wear. By spacing the tire beads farther
  apart the sidewalls are forced to flex in an area lower than normal and this can result in circumferential carcass breaks
  and/or separation.
- Use of a narrower rim brings potential mounting problems because the rim shield or flange cover molded into most drive tire designs tends to interfere with the seating of the tire beads on a narrow rim. Once mounted on a narrow rim, the tire shield applies undue pressure on the rim flange, with possible tire sidewall separation or premature rim failure at the heel radius. On a narrow rim the tread of the tire is rounded. As with the over-inflated tire tread wear will be concentrated in the center area of the tread and traction in the field will be reduced.

### 8.5.1 Tire Inflation

If tires are to operate for any length of time on roads or other hard surfaces and the draft load is not great, it is advisable to increase the pressure in the tire to the maximum recommendation in order to reduce the movement of the tread bars that causes excessive wiping action.

TIRE SIZE	PLY	PSI
600/50 x 22.5	16	52
600/50 x 22.5	18	70
700/40 x 22.5	16	52
700/40 x 22.5	18	70
425/65/22.5	20	75
11R/22.5	14	75

### 8.6 BRAKES

Before using any equipment equipped with brakes the operation of the brakes should be checked. Brake linings should be replaced before the rivets or support plates come in contact with the wheel drum. Perform all necessary maintenance before using equipment.

Any corrosive materials (saltwater, fertilizers) are destructive to metals. To properly maintain the life of the brake system flushing with a high pressure water hose is recommended. After washing be sure to grease actuator bearings (slides) and oil all moving parts. At the end of season it is recommended that the brake drums be removed and cleaned inside. Flush wheel bearings being careful not to contaminate the brake system with lube. Readjust the brakes.

Check and test the brakes before intensive use and every three months thereafter. Check the brake wear and the clearance between the brake linings and the drum visually. It is probable that the linings are worn when the brake travel has increased significantly. If the linings are worn to the minimum thickness replace with new.

Check that the brakes are clean and clean them if necessary. Lubricate the brake cam shaft bearings with grease zerks. To prevent grease from getting on the brake drum or linings, do not over grease.

#### 8.6.1 Brake Adjustment

Take up the slack when the stroke reaches about two thirds of the maximum travel. Adjust the slack adjuster until the brake shoes make contact with the drum. It may be necessary to jack the tire off of the ground and rotate the tire to feel contact with the drum. Once contact is felt back off the adjuster bolt on the slack adjuster 1/2 turn or until wheel turns freely without drag. Repeat the same process for the remainder of the brakes.

#### 8.7 STORING THE TRAILER

Sometimes it may be necessary to store your Meyer trailer for an extended period of time. Below is a list of items to perform before storage.

- Fully empty the trailer.
- Thoroughly clean the equipment.
- Lubricate the equipment. (See 8.1 LUBRICATION on page 33.)
- Make appropriate adjustments to equipment.
- Inspect the hitch and all welds on the equipment for wear and damage.
- Check for loose hardware, missing guards, or damaged parts.
- Check for damaged or missing safety signs (decals). Replace if necessary.
- Replace worn or damaged parts.
- Touch up all paint nicks and scratches to prevent rusting.
- · Place the equipment in a dry protected shelter.
- Place the equipment flat on the ground.

#### 8.8 RETURNING THE TRAILER TO SERVICE

After the Meyer trailer has been in storage, it is necessary to follow a list of items to return the equipment to service.

- Be sure all shields and guards are in place.
- Lubricate the equipment.
- Connect to a tractor and operate equipment, verify all functions operate correctly.
- Check for leaks. Repair as needed.

#### 9.0 PARTS REPAIR AND REPLACEMENT

#### 9.1 REPLACEMENT PARTS

Before servicing this equipment, insure that all personnel, including family members are familiar with the equipment and the safety hazards that are present, along with the safety practices that should be observed while working in this equipment.

Inspect the chassis' axles, o-beams, spindles, tires, hitches & all safety shielding, safety signs and safety lighting regularly. These parts if not watched closely, could pose potential injury or death. If any part is found in need of repair, follow the SHUTOFF & LOCKOUT POWER recommendations and have qualified personnel repair immediately.

Any individual that will be adjusting, servicing, maintaining, or clearing an obstruction from this machine needs to ensure that this machine stays safely "OFF" until the adjustment, service, or maintenance has been completed, or when the obstruction has been cleared, and that all guards, shields, and covers have been restored to their original position. The safety of all individuals working on or around this machine, including family members, are affected. The following procedure will be referred to throughout this manual, so be familiar with the following steps.

#### 9.1.1 Shutoff & Lockout Power Recommendations

#### 1. Think, Plan and Check

- a. Think through the entire procedure and identify all the steps that are required.
- b. **Plan** what personnel will be involved, what needs to be shut down, what guards / shields need to be removed, and how the equipment will be restarted.
- c. **Check** the machine over to verify all power sources and stored energy have been identified including engines, hydraulic and pneumatic systems, springs and accumulators, and suspended loads.
- 2. Communicate Inform everyone involved, including those working on or around this machine, that work is being done which involves keeping this machine safely "OFF".

#### 3. Power Sources

- a. **LOCKOUT -** Shut off engines and take the key, or physically lock the start/on switch or control. Disconnect any power sources which are meant to be disconnected (i.e. electrical, hydraulic, and PTO of pull-type units).
- b. **TAGOUT -** Place a tag on the machine noting the reason for the power source being tagged out and what work is being done. This is particularly important if the power source is not within your sight and/or will need to be isolated for a longer period of time.
- 4. **Stored Energy -** Neutralize all stored energy from its power source. Ensure that this machine is level, set the parking brake, and chock the wheels. Disconnect electricity, block moveable parts, release or block spring energy, release pressure from hydraulic and pneumatic lines, and lower suspended parts to a resting position.
- 5. **Test -** Do a complete test and personally double check all of the above steps to verify that all of the power sources are actually disconnected and locked out.
- **6. Restore Power -** When the work has been completed, follow the same basic procedures, ensuring that all individuals working on or around this machine are safely clear of the machine before locks and tags are removed and power is restored.

## **IMPORTANT**

It is important that everyone who works on this equipment is properly trained to help ensure that they are familiar with this procedure and that they follow the steps outlined above. This manual will remind you when to Shutoff & Lockout Power.

At times parts on this implement will become worn or damaged. Performing repairs on this implement can pose a risk of injury including death. To reduce risk, the party that will be doing the repair should be very knowledgeable of the implement and the equipment that they will be using to do the repair.

- Review the repair so that a plan can be put together and the proper equipment can be used to repair this implement safely and correctly.
- Personal safety equipment may include items such as safety glasses, protective footwear, hearing protection, gloves, fire retardant clothes. etc.

#### **Crushing Hazard**

Do Not work under suspended or blocked parts.

- The use of hoists and/or supports may be needed to handle heavy components.
- If the implement is being repaired in the field, make sure the parking brake of the tractor is engaged, the implement is on solid and level ground.
- Welding and torching should be done by properly trained individuals who have proven their skills.

Call the factory for any additional details you may need to perform the repair. Some parts may come with instruction sheets to assist in the repair. Instructions sheets may be provided with your parts order, otherwise, if available, instruction sheets can be e-mailed or faxed for you convenience.

NOTE: Be environmentally friendly and dispose of any waste materials properly. Recycle when appropriate.

## HYDRAULIC BRAKE SYSTEM, FOOT PEDAL CONTROL (FPC) XTSW24-228B, XTSW30-276SB

KEY	PART NUMBER	QTY	DESCRIPTION
1	55-0217	1	1/4" x 344" Hose (XTSW24-228B)
	55-0218	1	1/4" x 396" Hose (XTSW30-276SB)
2	32-0033	3/7	1/2" Loom Clamp
3	55-0212	1	Flat Faced Coupler
4	955-3809	1	3/8" Solid Plug
5	57-0046-FPC	1	Brake Manifold Less Relief
6	75-2410-8	4	Brake Cylinder Bracket Welded Assy.
7	55-0192	4	1/4" x 40" Hose
8	155-5406-6-4	1	3/8" to 1/4" Male to Female Bushing
9	55-0191	4	1/4" Male to 1/4" Female Swivel Coupler
10	955-3772-SPO	4	Brake Cylinder W/Spring Pull Off
11	29-0012	1	Hose Support Spring (XTSW30-276SB)
	811-2520-1Z	2	1/4-20 x 1" Eyebolt (XTSW30-276SB)
	810-2520-Z	4	1/4-20 Spin Locknut (XTSW30-276SB)
NS	65-0006-5	4	14" Nylon Tie Strap

## HYDRAULIC BRAKE SYSTEM, HAND LEVER CONTROL (HLC) XTSW24-228B, XTSW30-276SB

KEY	PART NUMBER	QTY	DESCRIPTION
1	55-0217	2	1/4" x 344" Hose (XTSW24-228B)
	55-0218	2	1/4" x 396" Hose (XTSW30-276SB)
2	32-0033	3/7	3/4" Loom Clamp
3	55-0013	2	Male Tips
4	55-0167	4	1/4" SQUARE PLUG
5	57-0046	1	RELIEF VALVE MANIFOLD BLOCK
6	75-2410-8	4	BRAKE CYLINDER BRACKET
7	55-0192	4	1/4" x 40" HOSE
8	29-0012	1	HOSE SUPPORT SPRING (XTSW30-276SB ONLY)
	811-2520-1Z	2	1/4-20 x 1" EYEBOLT (XTSW30-276SB ONLY)
	810-2520-Z	4	1/4-20 SPIN LOCKNUT (XTSW30-276SB ONLY)
9	55-0191	4	1/4" MALE TO 1/4" FEMALE SWIVEL COUPLER
10	955-3772-SPO	4	BRAKE CYLINDER
NS	65-0006-5	4	14" NYLON TIE STRAPS
NS	952-0001-7	3	7-1/4" NYLON TIE STRAPS

## TRAILER ASSEMBLY XTSSW45-348B

KEY	PART NUMBER	QTY	DESCRIPTION
1	See Page 56	-	SUSPENSION (Prior to SN 15XTS45201)

11	55-0221	2	Female-Male-Female Pipe Tee
12	55-0191	2	Male To Female 90° Elbow

## HYDRAULIC BRAKE SYSTEM, HAND LEVER CONTROL (HLC) XTSSW45-348B (SN 15XTS45201 Through SN 16XTS45201)

KEY	PART NUMBER	QTY	DESCRIPTION
1	155-04R17-84-1	4	84" Hose Assembly 7/16"-20 JIC Female Both Ends
2	155-JB04-06	6	4 JIC 37° x 06 BSPP Adapter With BSP Bonded Seal
3	32-0033	4	1/2" Vinyl Loom Clamp
4	65-0006-5	3	14" Nylon Tie Strap
5	32-0035	4	2" Loom Clamp
6	57-0046	1	Hydraulic Manifold
7	55-0218	2	1/4" x 396" Hose Assembly
8	55-0013	2	1/2" Male Pioneer Ends
9	155-04R17-28-2	4	28" Hose Assembly 7/16"-20 JIC Female Both Ends
10	55-0167	4	1/4" Plug
11	155-2601-04-04-04	2	Male Pipe Tee
12	155-2501-4-4	2	Male To Male 90° Elbow

### HYDRAULIC BRAKE SYSTEM, HAND LEVER CONTROL (HLC) XTSSW45-348B (SN 16XTS45202 & Later)

KEY	PART NUMBER	QTY	DESCRIPTION
1	155-2601-04-04-04	2	Male Pipe Tee
2	155-JB04-06	2	4 JIC 37° x 06 BSPP Adapter With BSP Bonded Seal
3	32-0033	4	1/2" Vinyl Loom Clamp
4	65-0006-5	3	14" Nylon Tie Strap
5	32-0035	4	2" Loom Clamp
6	57-0046	1	Hydraulic Manifold
7	55-0218	2	1/4" x 396" Hose Assembly
8	55-0013	2	1/2" Male Pioneer Ends
9	155-04R17-28-2	2	28" Hose Assembly 7/16"-20 JIC Female Both Ends
10	155-JB04-06-90	4	90° Adapter
11	155-04R17-96-1	4	96" Hose Assembly 7/16"-20 JIC Female Both Ends
12	155-2501-4-4	2	Male To Male 90° Elbow
13	55-0167	4	14" Plug

# HYDRAULIC STEERING LOCKOUT SYSTEM XTSSW45-348B (Prior To SN 15XTS45201)

KEY	PART NUMBER	QTY	DESCRIPTION
1	32-0035	6	2" LOOM CLAMP, VINYL COATED STEEL
2	55-0013	2	PIONEER COUPLER MALE TIPS
3	55-0167	2	1/4" SQUARE HEAD PLUG
4	55-0194	4	1/4 x 62-1/2" HYDRAULIC HOSE
5	55-0196	8	3/8 M x 1/4" SWIVEL FEMALE x 90 DEGREE ELBOW
6	55-0218	2	1/4 x 396" HOSE
7	57-0050	2	BLOCK MANIFOLD
8	65-0006-5	3	14" NYLON TIE STRAPS
9	955-3770	4	1/4 x 84" HYDRAULIC HOSE
10	955-3809	4	3/8" SQUARE HEAD PLUG

# HYDRAULIC STEERING LOCKOUT SYSTEM XTSSW45-348B (SN 15XTS45201 & Later)

KEY	PART NUMBER	QTY	DESCRIPTION
1	155-JB04-04	4	#4 JIC x 4 BSPP Male Adapter With BSP Bonded Seal
2	155-04R17-96-1	2	96" Hose Assembly 7/16-20 JIC Female Both Ends
3	65-0006-5	3	14" Nylon Tie Strap
4	32-0037	3	1-1/4" Loom Clamp
5	155-2404-4-4	4	#4 JIC Adapter
6	155-04R17-58-2	2	58" Hose Assembly 7/16"-20 JIC Female Both Ends
7	57-0050	1	Hydraulic Manifold
8	32-0035	1	2" Loom Clamp
9	55-0218	1	1/4" x 396" Hose 1/4" MPT x 1/2" MPT
10	55-0013	1	1/2" Male Pioneer End

# HYDRAULIC STEERING UNLOCKING SYSTEM XTSSW45-348B (SN 15XTS45201 & Later)

KEY	PART NUMBER	QTY	DESCRIPTION
1	155-JB04-06	2	#4 JIC x 6 BSPP Male Adapter With BSP Bonded Seal
2	155-04R17-96-1	2	96" Hose Assembly 7/16-20 JIC Female Both Ends
3	65-0006-5	2	14" Nylon Tie Strap
4	32-0037	3	1-1/4" Loom Clamp
5	155-2404-4-4	4	#4 JIC Adapter
6	155-04R17-58-2	2	58" Hose Assembly 7/16"-20 JIC Female Both Ends
7	57-0050	1	Hydraulic Manifold
8	32-0035	1	2" Loom Clamp
9	55-0218	1	1/4" x 396" Hose 1/4" MPT x 1/2" MPT
10	55-0013	1	1/2" Male Pioneer End
